SUBJECT INDEX TO VOLUME 39

AMPHIBIANS
digital reduction, phylogeny, 8
feeding behavior, salamanders, 83
sexual selection, wood frog, 260
phylogeny, Australian anurans, 325
mate choice, salamander, 370
geographic variation, *Bufo marinus*, 1065
viability selection, *Hyla gratiosa* tadpole, 1087
aggressive behavior, competition, salamanders, 1282

BEHAVIOR
feeding, salamanders, 83
mate choice, wood frog, 260
food preference, *Drosophila*, 362
mate choice, salamander, 370
pollinator behavior, 418
habitat preference, *Drosophila*, 645
song dialects, white-crowned sparrow, 687, 1177
bird predation on butterflies, 845, 852
oviposition site selection, *Drosophila*, 869
assortative mating, Lesser Snow Goose, 904
courtship, lacewings, 965
mate choice, mosquitoes, 998
mating preference, *Drosophila*, 1100
assortative mating, beetles, 1123
female choice, genetic models, 1185
aggression, salamanders, 1282
statistics of sexual isolation, 1380
phylogeny, 1384

BIRDS
density fluctuation, allozyme frequency, willow grouse, 115
hybrid zone stability, speciation, Northern Flicker, 135
plumage polymorphism, fecundity, Lesser Snow Goose, 165
plumage polymorphism, viability, Lesser Snow Goose, 178
selection on bill characters, Darwin's finches, 523
clutch size reduction, California Gull, 667
song dialects, gene flow, white-crowned sparrow, 687, 1177
predation on butterflies, Blue Jays, 845
foraging dynamics, predation on monarch butterflies, 852
plumage polymorphism, assortative mating, Lesser Snow Goose, 904
body size, seasonality, House Sparrow, 1327

BOOKS REVIEWED
Genetics and Conservation, a Reference for Managing Wild Animal and Plant Populations, 1180
The Eclipse of Darwinism. Anti-Darwinian Evolution Theories in the Decades around 1900, 1395
Evolution of Fish Species Flocks, 1396
The Lesser Apes—Evolutionary and Behavioural Biology, 1399
Social Evolution, 1401

CHROMOSOMAL
intraspecific chromosomal variation, clinal variation, genetic divergence, hybridization, goodeid fish, 122
fusion, *Tribolium*, 220
centric fusion, speciation, bats (*Rhogeessa*), 233
polymorphism, clinal variation, wing length, *Drosophila*, 838

COMPETITION (see also ECOLOGY)
Lotka-Volterra and coevolutionary models, 444
body size ratios, sensitivity analysis, 695
effects of mutagenesis, *Drosophila*, 940, 941
coevolution, niche separation, 1009
character displacement, resource utilization, 1207
aggressive behavior, salamanders, 1282

DEVELOPMENT
phylogeny, morphological variation, experimental embryology, amphibians, 8
developmental stability, introgressed populations, heterozygosity, sunfish, 104
developmental stability, meristic variation, rainbow trout, 308
origin of tetrapod limb, experimental embryology, 1159
developmental stability, hybridization, salmonid fishes, 1318
coiling in gastropods, 1364

DROSOPHILA
clinal variation, ethanol tolerance, *D. melanogaster*, 278
food preference, genetic and environmental determinants, *D. tripunctata*, 362
genetic differentiation, *D. athabasca*, 467
male effects on fecundity, *D. melanogaster*, 638
habitat preference, reproductive isolation, *D. melanogaster*, 645
courtship-related character, genetic variation, *D. sylvestris*, 678
historicity, enzyme polymorphism, *D. melanogaster*, 819
clinal variation, chromosomal arrangements, *D. subobscura*, 838
oviposition site selection, *D. melanogaster*, *D. simulans*, 869
mutagenesis and competition, *D. melanogaster*, *D. simulans*, 940, 941
genetic covariation, life-history components, novel environments, *D. melanogaster*, 943
mating preference, chromosomal inversion, DDT resistance, *D. melanogaster*, 1100
parasite pressure, amanitin tolerance, *D. tripunctata*, 1295
founder-flush speciation, reproductive isolation, *D. pseudoobscura*, 1388

ECOLOGY
bird predation on butterflies, 93, 845, 852, 1155
life history, fitness, Lesser Snow Goose, 165, 178, 904

SUBJECT INDEX TO VOLUME 39

AMPHIBIANS
digital reduction, phylogeny, 8
feeding behavior, salamanders, 83
sexual selection, wood frog, 260
phylogeny, Australian anurans, 325
mate choice, salamander, 370
geographic variation, *Bufo marinus*, 1065
viability selection, *Hyla gratiosa* tadpole, 1087
aggressive behavior, competition, salamanders, 1282

BEHAVIOR
feeding, salamanders, 83
mate choice, wood frog, 260
food preference, *Drosophila*, 362
mate choice, salamander, 370
pollinator behavior, 418
habitat preference, *Drosophila*, 645
song dialects, white-crowned sparrow, 687, 1177
bird predation on butterflies, 845, 852
oviposition site selection, *Drosophila*, 869
assortative mating, Lesser Snow Goose, 904
courtship, lacewings, 965
mate choice, mosquitoes, 998
mating preference, *Drosophila*, 1100
assortative mating, beetles, 1123
female choice, genetic models, 1185
aggression, salamanders, 1282
statistics of sexual isolation, 1380
phylogeny, 1384

BIRDS
density fluctuation, allozyme frequency, willow grouse, 115
hybrid zone stability, speciation, Northern Flicker, 135
plumage polymorphism, fecundity, Lesser Snow Goose, 165
plumage polymorphism, viability, Lesser Snow Goose, 178
selection on bill characters, Darwin's finches, 523
clutch size reduction, California Gull, 667
song dialects, gene flow, white-crowned sparrow, 687, 1177
predation on butterflies, Blue Jays, 845
foraging dynamics, predation on monarch butterflies, 852
plumage polymorphism, assortative mating, Lesser Snow Goose, 904
body size, seasonality, House Sparrow, 1327

BOOKS REVIEWED

mating preference, chromosomal inversion, DDT resistance, *D. melanogaster*, 1100
parasite pressure, amanitin tolerance, *D. tripunctata*, 1295
founder-flush speciation, reproductive isolation, *D. pseudoobscura*, 1388

ECOLOGY
bird predation on butterflies, 93, 845, 852, 1155
life history, fitness, Lesser Snow Goose, 165, 178, 904

handling time, 212
hybrid zones, crickets, 244
sexual selection, wood frog, 260
progeny success, chasmogamous vs. cleistogamous flowers, grass, 335
food preference, *Drosophila*, 362
life-history variation, snail, 387
life-history variation, *Phlox drummondii*, 396
allele frequency cline, mussel, 432
competition, coevolutionary models, 444
selection on bill characters, Darwin's finches, 523
progeny success, chasmogamous vs. cleistogamous flowers, *Impatiens*, 533
life-history variation, primates, 559
habitat preference, *Drosophila*, 645
sexual vs. asexual reproduction, density gradients, *Anthoxanthum odoratum*, 657
clutch size reduction, California Gull, 667
competition, body size ratios, 695
theta models, 707, 709
fungal pathogen, compatibility, legume, 713
character divergence, *Dalechampia scandens* (Euphorbiaceae), 733
tristyly, 766
gene flow, *Plantago*, 775
life-history characters, mutation, 804
oviposition site selection, *Drosophila*, 869
reproduction, biogeography, angelfishes, 878
costs of changing sex, fishes, 915
life-history characters, genetic covariation, 943
competition communities, 1009
transplantation experiments, genetic differentiation with habitat, *Spartina patens*, 1034
size, environmental and genetic determinants, *Viola sororia*, 1053
allozyme frequencies, soil characteristics, *Gaillardia pulchella*, 1076
viability selection, tadpole, 1087
competition, character displacement, 1207
cave arthropods, 1223
flower color, outcrossing, *Ipomoea purpurea*, 1242
transplantation experiments, local adaptation, sea anemone, 1250
flower color, reproductive displacement, *Phlox*, 1275
competition, salamanders, 1282
parasite pressure, amanitin tolerance, *Drosophila*, 1295
natural selection at *Lap* locus, mussel, 1302

ELECTROPHORETIC VARIATION (see also VARIATION—GENETIC)
E. coli, 1
sunfish, 104
willow grouse, 115
goodeid fish, 122
cyprinid fishes, 152
Hymenoptera, 190, 200, 201, 226
mammals, 210
Daphnia, 216
Tribolium, 220
bats, 233
crickets, 244
Drosophila, 278, 467, 819
rainbow trout, 308
geometrid moth, 315
bacteria associated with *Rhagoletis*, 405
mussel, 432, 1302
mosquitofish, 451
lability of heterozygosity estimates, 463
Impatiens, 533
Lisianthius skinneri, 582
statistical analysis of heterozygosity data, 623
white-crowned sparrow, 687, 1177
sponges, 724
Hawaiian *Bidens*, 753
fire ant, 888
mosquitoes, 985
Bufo marinus, 1065
Gaillardia pulchella, 1076
estimating relatedness, 1169
Layia, 1236
Ipomoea purpurea, 1242
periodical cicadas, 1261
salmonid fishes, 1318

EULOGY
George Gaylord Simpson, 229

FISH
genomic coadaptation, developmental stability, heterozygosity, introgressed populations, sunfish, 104
chromosomal divergence, goodeid fishes, 122
selection against hybrids, cyprinid fishes, 152
meristic variation, developmental stability, rainbow trout, 308
biochemical genetics, mosquitofish, 451
reproductive ecology, biogeography, Indo-West Pacific angelfishes, 878
sequential hermaphroditism, costs, 915
developmental stability, hybridization, salmonid fishes, 1318

FITNESS (see THEORY)

GENE FLOW
method of estimation, migration, rare alleles, 53
pollen dispersal, pollinator behavior, 418
song dialects, white-crowned sparrow, 687, 1177
intrapopulational variation in pollen-mediated gene flow, *Plantago*, 775
dispersal abilities, ecological requirements, cave arthropods, 1223

HYBRIDIZATION
developmental stability, fish, 104, 1318
intraspecific chromosomal variation, goodeid fish, 122
hybrid zone, reproductive isolation, speciation, flickers, 135
fitness, heterozygosity, speciation, cyprinid fish, 152
phenotypic variation, asexual reproduction, *Daphnia*, 216
reproductive isolation, life-history variation, crickets, 244
hybrid zone, fluctuation, 1164
developmental stability, salmonid fishes, 1318

INSECTS (see also DROSOPHILA)
bird predation on butterflies, 93

sperm mixing, cockroach, 159
heterozygosity, Hymenoptera, 190, 200, 201
chromosomal evolution, *Tribolium*, 220
genetic variability, *Dialictus zephyrus* (Hymenoptera), 226
reproductive isolation, crickets, 244
clonal diversity, *Alsophila pometaria* (Lepidoptera), 315
bacterial symbiosis, *Rhagoletis* (Diptera), 405
evolution of wings, 488
size-disassortative mating, beetle, 705
morphometric correlation, aphid, 792
butterfly wing marking, predation, 845
foraging dynamics of bird predators, monarch butterflies, 852
male diploidy, fire ant, 888
sex ratios, fig wasps, 949
call differences, speciation, green lacewings, 965
allozyme patterns, phylogeny, mosquitoes, 985
ethological divergence, reproductive isolation, mosquitoes, 998
assortative mating, aggregation, meloid beetles, 1123
warning coloration, bird predation experiments, butterflies, 1155
gene flow, cave arthropods, 1223
population structure, allozyme frequencies, periodical cicadas, 1261

LIFE-HISTORY VARIATION
plumage color, fitness, Lesser Snow Goose, 165, 178
reproductive isolation, crickets, 244
body size, reproductive success, wood frog, 260
phenotypic plasticity, snail, 387
fitness, local adaptation, *Phlox drummondii*, 396
body size, primates, 559
spontaneous mutation, *Daphnia*, 804
larval duration, adult size, biogeography, angelfishes, 878
genetic correlation, novel environment, *Drosophila*, 943

MAMMALS
size, genetic variability, 210
chromosomal evolution, bats (*Rhogeessa*), 233
phylogeny, immunological distance, Felidae, 473
life-history variation, primates, 559
population structure, mitochondrial DNA analysis, cotton rat (*Sigmodon hispidus*), 831
sexual dimorphism, body weight, primates, 1335
allometry, titanothere, 1352

MOLECULAR EVOLUTION
posttranslational modification, polymorphism, alkaline phosphatase isozymes, *E. coli*, 1
albumin evolution, phylogeny, Australian frogs, 325
albumin evolution, phylogeny, Felidae, 473
DNA restriction fragment analysis, phylogeny, tropical shrub, 594
DNA restriction fragment analysis, population structure, cotton rat, 831

MUTATION
spontaneous, life-history variation, *Daphnia*, 804

PALEOBIOLOGY
insect wings, aerodynamic and thermoregulatory hypotheses, 488
shell morphology, environmental effect, 699
tracheid size, plants, 1110
lactation, 1147
incomplete fossil record, South American birds, 1174
allometry, heterochrony, biomechanics, titanothere, 1352

PHYLOGENY
experimental embryology, amphibians, 8
speciation, albumin immunological distance, Australian frogs, 325
albumin immunological distance, Felidae, 473
isozymes, genetic variation, tropical shrub, 582
DNA restriction fragment analysis, tropical shrub, 594
methods of estimation, 609
confidence limits, 783
allozyme patterns, morphology, hybridization, geologic history, mosquitoes, 985
quantitative assessment of phylogenetic constraints, sexual dimorphism, body weight, primates, 1335
use in behavior and ecology, 1384

REPRODUCTION–ANIMAL
sperm mixing, cockroach, 159
fecundity, plumage polymorphism, Lesser Snow Goose, 165
sexual selection, proximate mechanisms, wood frog, 260
mate choice, salamander, 370
life-history variation, primates, 559
male effects, female fecundity, *Drosophila*, 638
clutch size, California Gull, 667
size-disassortative mating, beetle, 705
oviposition site selection, *Drosophila*, 869
ecology, biogeography, Indo-West Pacific angelfishes, 878
male diploidy, fire ant, 888
assortative mating, plumage color, fitness, Lesser Snow Goose, 904
sex change, costs, fish, 915
call differences, speciation, green lacewings, 965
ethological isolation, mate choice, mosquitoes, 998
mating preference, chromosomal inversion, DDT resistance, *Drosophila*, 1100
size-assortative mating, aggregation, beetles, 1123
sexual isolation, statistics, 1380

REPRODUCTION—PLANT
self-fertilization, outcrossing, inbreeding depression, 24, 41
progeny success, chasmogamous vs. cleistogamous flowers, genetic variation, *Danthonia spicata*, 205
phenotypic and genetic variation, chasmoga-

mous vs. cleistogamous flowers, *Danthonia spicata,* 335
pollen dispersal, pollinator behavior, gene flow, 418
progeny success, chasmogamous vs. cleistogamous flowers, *Impatiens,* 533
sexual vs. asexual reproduction, *Anthoxanthum odoratum,* 657
character divergence, reproductive ecotypes, *Dalechampia scandens* (Euphorbiaceae), 733
tristyly, adaptive significance, *Pontederia cordata,* 766
pollen-mediated gene flow, *Plantago lanceolata,* 775
genetic basis, ecological amplitude, *Spartina patens,* 1034
flower color, outcrossing, reproductive success, *Ipomoea purpurea,* 1242
flower color, reproductive character displacement, *Phlox,* 1275

SELECTION EXPERIMENTS
ethanol tolerance, clinal variation, *Drosophila,* 278
group, individual, environmental heterogeneity, 545
disruptive, habitat preference, speciation, *Drosophila,* 645

SELECTION—NATURAL
bird predation, butterflies, phenotypic variation, 93
clinal variation, mussel, 432
bill characters, Darwin's finches, 523
wing markings, bird predation, butterfly, 845
bird predation, aggregation, monarch butterflies, 852
viability, ecological factors, frog, 1087
higher level of selection, functional unit, 1132
warning coloration, individual selection, butterflies, 1155
local adaptation, size, fecundity, sea anemone, 1250
amanitin tolerance, parasite pressure, *Drosophila,* 1295
physiological basis, *Lap* locus, mussel, 1302

SELECTION—SEXUAL
sympatric speciation, model, 66
body size, reproductive success, life-history variation, wood frog, 260
mate choice, mating success, salamander, 370
female choice, genetic models, 1185

SELECTION THEORY (see THEORY)

SEX
pseudogamy, 294
sexual vs. asexual reproduction, density-dependent selection hypothesis, grass, 657
parthenogenesis, inbreeding, cost of meiosis, 1194

SEX RATIO
individual vs. group selection, local parental control, 349
inbreeding, local mate competition, fig wasps, 949

SPECIATION
sexual selection, sympatric speciation, model, 66
hybrid zone stability, Northern Flicker, 135
two kinds of genetic variability, 223
chromosomal evolution, centric fusion, bats, 233
albumin evolution, Australian frogs, 325
Rhagoletis-bacteria symbiosis, 405
genetic differentiation, reproductive isolation, *Drosophila,* 467
call variation, reproductive isolation, lacewings, 965
genetic divergence, *Layia,* 1236
founder-flush speciation, *Drosophila,* 1388

THEORY
self-fertilization, outcrossing, inbreeding depression, 24
sympatric speciation, sexual selection, 66
predation, handling time, 212
genetic variability, speciation, 223
pseudogamy, 294
sex ratio, individual vs. group selection, 349
coevolutionary models, competition, 444
phenotypic plasticity, environmental heterogeneity, 505
theta model, 707
theta model, seasonal variation, 709
altruism, population structure, 928
competition communities, faunal buildup, 1009
irreversibility, phenotypic states, 1149
estimating genetic relatedness, 1169
female choice, 1185
parthenogenesis, inbreeding, cost of meiosis, 1194
character displacement, 1207
rate of adaptive evolution, 1393

VARIATION—GENETIC
heterozygosity, developmental stability, fish, 104, 1318
allozyme frequency changes, population density, genetic distance, willow grouse, 115
heterozygosity, Hymenoptera, 190, 200, 201, 226
chasmogamous vs. cleistogamous progeny, 205, 335
heterozygosity, body size, mammals, 210
sexual and asexual reproduction, asexual genotypes, clonal diversity, moth, 315
food preference, *Drosophila,* 362
genetic distance, population structure, fish, 451
self-recognition, sponges, corals, 461, 724
heterozygosity, lability of estimates, 463
differentiation, *Drosophila,* 467
phenotypic plasticity, environmental heterogeneity, quantitative genetic model, 505
isozymes, tropical shrub, 582
heterozygosity, statistical analysis, 623
male courtship character, *Drosophila,* 678
adaptive radiation, plant, 753
pollen-mediated gene flow, 775
historicity in evolution, allozyme frequencies, *Drosophila,* 819
mitochondrial DNA, population structure, cotton rat, 831

covariation, life-history components, *Drosophila*, 943
genetic differentiation with habitat, phenotypic plasticity, genetic correlation, *Spartina patens*, 1034
size, *Viola sororia*, 1053
geographical variation, genetic drift, giant toad, 1065
allozyme frequencies, soil characteristics, plant, 1076
genetic divergence, speciation, plant, 1236
geographical patterns, cicadas, 1261

VARIATION—PHENOTYPIC
digital reduction, amphibians, 8
feeding behavior, phylogeny, salamanders, 83
wing coloration, markings, butterflies, 93, 845, 1155
plumage color, fitness, life history, Lesser Snow Goose, 165, 178
chasmogamous vs. cleistogamous progeny, 205, 335
morphology, *Daphnia*, 216
meristic variation, rainbow trout, 308
food preference, genetic variation, *Drosophila*, 362
plasticity, environmental heterogeneity, quantitative genetic model, 505
bill characters, Darwin's finches, 523
cilia number variation, genetic variation, *Drosophila*, 678
song dialects, gene flow, white-crowned sparrow, 687, 1177
shell morphology, environmental effect, 699
fungal attack, self-fertilization, legume, 713
floral character divergence, ecotypes, 733
geographic variation, morphometric correlation, zonhid, 792
wing length, chromosomal polymorphism, *Drosophila*, 838
plumage color, assortative mating, Lesser Snow Goose, 904
size, environmental and genetic determinants, *Viola sororia*, 1053
interspecific and intraspecific aggressive behavior, competition, salamanders, 1282
body size, seasonality, House Sparrow, 1327
coiling in gastropods, development, 1364
